

Quality Indicators for Philosophy

Philosophy is a discipline with a wide range of topics, intellectual traditions, and methodologies and therefore the question what quality in philosophy is does not have an easy answer. The OZSW project 'Quality indicators for Philosophy' (QIP) has been a search for answers to this question. It has resulted in indicators for scientific quality and societal relevance that can be used in the assessment of philosophical research. The overall framework of the project has been the Standard Evaluation Protocol (SEP) 2015-2021 of the Dutch Universities, more specially matrix D1 with two sets of output indicators (page 25).

Our QIP project has been part of a larger project on quality indicators for the humanities (Quality and Relevance in the Humanities, www.qrih.nl) in which generic building blocks (indicators) have been developed for each of the six cells of the SEP matrix. These quality indicators can be used by groups or institutes when writing their self-evaluation report for a research assessment and, based on these indicators and on so-called reasoned indicators that follow from the specific research profile of a group or institute, a narrative can be developed about research quality and the policies promoting it. Such a narrative is more comprehensive than output alone (*i.e.*, publications), and usually covers *all six* cells of the SEP matrix.

In this document, quality indicators for philosophy are described. For scientific quality a set of indicators has been developed that is partly generic for philosophy, and partly specific for the various sub-disciplines. For relevance to society a set of indicators has been developed that is pertinent to philosophy as a whole and for all of its sub-disciplines (see Table 1). Although the indicators that are specific for sub-disciplines get the most attention in this document when counted in pages, all indicators are important and they form the building blocks for the narrative of a research group. For further descriptions of specific indicators, please refer to the QRiH website <http://www.qrih.nl/nl/sep-evaluatie>.

	Indicators of Research Quality	Indicators Relevance to Society
Demonstrable products	<p>1. Research products for peers</p> <p><i>Articles and special issues in peer-reviewed journals</i></p> <p><i>Monographs, edited books, and book chapters with leading academic publishers</i></p>	<p>4. Research products for societal target groups</p> <p><i>Written output for stakeholders and policy makers (reports, white papers, websites)</i></p> <p><i>Outreach activities for stakeholders and policy makers (keynotes, round tables, specialist conferences)</i></p> <p><i>Hybrid publications for both scientific and general audiences</i></p> <p><i>Educational products, for example textbooks</i></p> <p><i>Dissemination of results to the general public (newspapers, websites, public lectures, blogs)</i></p>
Demonstrable use of products	<p>2. Use of products by peers</p> <p><i>Citations by peers</i></p> <p><i>Substantive discussion in research products of others (reviews, book symposia)</i></p> <p><i>Translations</i></p> <p><i>Republication of texts in anthologies etc. edited by others</i></p> <p><i>Substantive research visits by peers (sabbatical for example)</i></p>	<p>5. Use of research products by societal target groups</p> <p><i>Use of research products in textbooks and educational material by others</i></p> <p><i>Impact of research output on societal stakeholders and policy makers (usage in debate and decision-making)</i></p> <p><i>Collaboration with societal stakeholders in carrying out research, commissioned studies</i></p>

	Indicators of Research Quality	Indicators Relevance to Society
Demonstrable marks of recognition	<p>3. Marks of recognition by peers</p> <p><i>Scholarly awards and prizes, membership in learned academies</i></p> <p><i>Awarded grants by national or international science foundations</i></p> <p><i>Membership of scientific committees and editorial boards</i></p> <p><i>Delivering keynote lectures</i></p> <p><i>Invitations for expert workshops and edited volumes</i></p>	<p>6. Marks of recognition by societal target groups</p> <p><i>Membership of civil advisory bodies</i></p> <p><i>Research funding from industry and third parties</i></p> <p><i>Public prizes</i></p> <p><i>Appointments and positions funded by societal groups</i></p>

Table 1: Quality indicators for philosophy

The quality indicators specific to sub-disciplines are the following: ‘articles and special issues in peer-reviewed journals’; and ‘monographs, edited books, and book chapters with leading academic publishers’ (both in Cell 1). Some journals or publishers are relevant for sub-discipline A, while others are relevant for sub-discipline B. In addition, there are journals and publishers which are relevant to philosophy as a whole. This has led to a number of lists of journals and publishers for a total of 16 sub-disciplines in philosophy, and a list of general journals and publishers. These lists are described below.¹

The status of these lists of journals and publishers demands further explanation.

- They must be seen as giving guidance in the search for, and articulation of, good quality in the discipline. ‘Giving guidance’ is a broad term and is explicitly meant this way.
- They must be seen as a representative sample of good journals in a (sub)-discipline. The lists are therefore not exhaustive (other good journals may exist) and do not only contain top journals.
- The identification of what good journals or good publishers are may change over time and therefore the lists will be revised every five years by the OZSW.
- Interdisciplinary journals or relevant journals from other disciplines are not part of the lists although philosophers regularly publish in them. This has been a conscious choice. Given the enormous scope of philosophy, there are so many relevant interdisciplinary and disciplinary journals that it is simply impossible to include all of them. The fact that they are not included does not mean that they are unimportant. On the contrary, very interesting work is being done at the boundaries of these disciplines.
- In some research areas there are good reasons for philosophers to publish in extremely specialised journals or book series, or even in unorthodox publication channels. It is also impossible to do justice to this plurality in these lists.
- Generic top journals such as Nature, Science, Proceedings of the National Academy of Sciences, etc. are also not part of the lists. While sometimes philosophers will publish in these journals they are not typical target audiences for our discipline.
- A good way to look at the lists is the following. Say a young researcher asks a senior colleague: What are good journals in our discipline? And where should I be trying to publish to get tenure? These lists can give guidance in such a case.

The quality indicators described in Table 1 above, plus the lists of journals and publishers below, jointly constitute our agreed quality standards in philosophy. They are meant to be used in internal discussions about quality within philosophy departments, research institutes and the Dutch Research School of Philosophy OZSW, as well as in the education of young researchers/PhD students. Furthermore, they can be

¹ Combined there are roughly 350 journals and 85 publishers mentioned in the lists.

used when hiring or promoting scientific staff. Finally, they are important when writing self-evaluation reports for external research assessments, and can be used by visitation committees when assessing the quality of research groups and institutes.

In all these cases we strongly want to emphasise that judging the research quality of institutes or people can never be simply ticking boxes with the quality indicators formulated in this document. A quality judgement is a complex judgement in which the quality indicators have to be contextualized and weighed.

The Board of the Dutch Research School of Philosophy OZSW wishes to thank the more than 75(!) members who actively contributed to the creation of this important document for philosophy.²

On behalf of the Board,
Anthonie Meijers
Chair³

ANNEX 2: List of Journals and Publishers for the History of Philosophy

History of Philosophy differs in a number of relevant respects from other sub-disciplines of philosophy, while there are also differences within the field of History of Philosophy itself. The following issues should be taken into account when discussing quality indicators in the context of research and publication policies:

- Firstly, languages: In the history of classical philosophy and partly also in the history of early modern philosophy a great deal of publications are written in English, with other European publication languages also being important to the latter field. Thus, while many journals are multilingual and English language is increasingly imperative in scientific written output, an important market remains for academic publications in the language of the philosopher being studied (e.g., to publish about Kant in German and about Merleau-Ponty in French).
- Editions: In some sub-disciplines of the history of philosophy editorial work is a crucial part of philosophical research and so the importance of editions should thus be valued in research policies (often a comparison is made here with fundamental research in the sciences).
- Interdisciplinarity: Research in the (modern) history of philosophy interacts with many other disciplines (history, history of science, art history, historical methodology, systematic sub-disciplines of philosophy, etc.) and therefore research in the history of philosophy can be found in the publications of adjacent disciplines.
- Publication traditions: There is a tradition to not only, and often not primarily, aim for articles in journals. The monograph (held in greater respect than a number of articles), the collection of essays, and the handbook/companion are important forms of publication. Sometimes the difference between journal and collection of essays disappears (think of year books) and the same goes for journals/series.
- Finally, translations and texts for a wider audience are part of (the valorisation of) research in the history of philosophy.

2. Applied Ethics

Good research in applied ethics is not only published in the journals below, which are dedicated to a specific branch of applied ethics, but also in two other types of journals. Some excellent work is published in general practical philosophy journals, such as *Philosophy and Public Affairs*, *Journal of Applied Philosophy*, or *Ethical Theory and Moral Practice*. Given that in applied ethics doing scientific research and achieving social impact are often strongly interwoven activities, it also makes sense to publish research in (top) journals that are devoted to the particular field of application e.g. in medical journals like *The Lancet* or *New England Journal of Medicine*; *Risk Analysis* for ethics of technology; and *Animal Welfare* for animal and environmental ethics.

The intertwining of scientific quality and societal relevance characteristic of applied ethics also implies a fluid border between conventional academic publications and other genres. In terms of reaching our goals in this field of research, this inclusiveness should not be seen as a disadvantage but rather as an asset. Thus, you can find excellent scientific work in non-English language journals, in books written for an interdisciplinary audience, and in reports written for high-level societal organisations (e.g. Gezondheidsraad, World Health Organisation) and national governments.
