OZSW Annual Report 2024

Chapter 1: Information about the research school

1.1 Partners

The Dutch Research School of Philosophy (Nederlandse Onderzoeksschool Wijsbegeerte – OZSW) is a collaboration between twelve Dutch institutes for academic philosophy. These are:

TU Delft, Ethics and Philosophy of Technology Section; **TU Eindhoven**, Philosophy and Ethics Group; **Erasmus University Rotterdam**, Erasmus School of Philosophy; **Leiden University**, Institute for Philosophy; **Maastricht University**, Department of Philosophy; **Radboud University**, Faculty of Philosophy, Theology, and Religious Studies; **Tilburg University**, Department of Philosophy; **University of Amsterdam**, Department of Philosophy; **University of Groningen**, Faculty of Philosophy; **University of Twente**, Department of Philosophy; **Utrecht University**, Department of Philosophy and Religious Studies; **VU Amsterdam**, Department of Philosophy.

1.2 Mission

Our mission is to strengthen academic philosophy in the Netherlands with respect to the following four goals:

1. Education. To organize educational activities that give research master students and PhD researchers access to the expertise of academic philosophers across the Netherlands.
2. Research. To organize research activities that give academic philosophers a platform to present their work to their colleagues at Dutch universities.
3. Community. To organize activities that strengthen the social bonds and encourage professional collaborations between academic philosophers in the Netherlands.
4. Outreach. To collaborate with social partners for the dissemination of philosophical research to professional groups inside and outside Dutch universities, as well as to the Dutch public.

1.3 Organization

The OZSW consists of a board, an office, three chambers, and a PhD council.

The board consists of twelve deans and department heads (one from each partner). It sets school policy and oversees school operations. The chair is prof. dr. Maureen Sie (Tilburg University).

The office handles daily operations. It rotates to a different partner every five years, with Radboud University hosting the school in 2024-2028. The office consists of dr. Arjen Kleinherenbrink (director, 0.3 FTE), Janneke Toonders (assistant director, 0.5 FTE), and Eva Hendriks (secretary, 0.3 FTE).

The three chambers are responsible for the school's educational activities in specific areas of philosophy. These are *Theoretical Philosophy*, *History of Philosophy*, and *Ethics and Practical Philosophy*. Each chamber has one member at each partner (unless its domain has no local presence in research and teaching). Chamber members keep their finger on the pulse of research and education in their institute, encourage colleagues to organize activities for the school, help finetune the design of activities, and evaluate surveys from activities.

The PhD council has seats for one PhD researcher from each partner. After a recruitment drive in 2024 eleven seats are now filled, with Delft still pending. The council has delegates in each chamber to represent the interests of PhD researchers. The council also organizes community-building events for PhD researchers.

Lists with our current members of the board, chambers, and council can be found in the 'About the OZSW' section of OZSW.nl.

1.4 Members

Appendix 1 contains a table with the number of members per category, as well as lists of PhD researchers and research master students.

By the end of 2024, the school had **851 members**: 237 research master students (87 new), 212 PhD researchers (46 new), and 402 senior researchers.

The school has five membership types. PhD researchers for whom a partner pays the membership fee (usually these are researchers working for that institute) are Regular PhD members. PhD researchers who are not sponsored by a partner institute are Associate PhD members who either pay their own fee or are sponsored by another institute. Research Master students do not pay a fee and are enrolled by their institute. Senior Members are department members from our partner institutes with (at least) a doctoral degree and do not pay a fee. Associate Senior Members are researchers with (at least) a doctoral degree from other institutes and pay their own fee. Further details about memberships are found under 'Become a member' at OZSW.nl.

The OZSW has only just started to distinguish postdoctoral researchers from other senior members. At the time of writing this report, only three postdoctoral researchers have identified themselves as such in response to our queries.

1.5 Credits

	Awarded in 2024	Concerning 2024	Concerning 2023	Concerning 2022
ReMa	**409.5**	**368.5**	41	-
PhD	205	171	29	5
Other	58.5	41.5	17	-
Total	673	581	87	5

Credits awarded to research master students

The OZSW is happy to report that **409.5** credits were awarded to research master students in 2024, of which **368.5** credits concerned activities in 2024. This means that the number of credits awarded per student is now **2,7 times higher** than in the pre-pandemic year of 2019 (see table below). We reflect on this increase in Chapter 2.

	# ReMa members	# ReMa credits obtained	Ratio credits/student
2019	225	144	0.64
2020	318	95	0.29
2021	302	106.5	0.35
2022	269	231	0.86
2023	256	285	1.11
2024	237	409.5	1.73

Credits awarded to PhD researchers

The OZSW awarded 205 credits to PhD researchers, of which 171 credits concerned activities in 2024. This is markedly lower than the previous two years, with 326.5 credits being awarded to PhD researchers in 2023 and 351 credits in 2022. We reflect on this decrease in Chapter 2.

Chapter 2: Overview of education and credits attained

Appendix 2 contains a table with activities organized in 2024, including obtainable and awarded credits, participants per activity, and organizing institutions.

OZSW educational activities (i.e. activities for which credits can be attained) are initiated at the level of the three chambers. Once a chamber has greenlighted a proposal (after discussing and helping to finetune it), the OZSW office takes over to assist organizers with practical matters such as communication, registration, and payments. For recurring activities (without obtainable credits) such as the annual OZSW conference, the OZSW office assists local organizing teams at its partners. Recurring activities rotate to partners according to a schedule made years in advance.

The OZSW organized 16 activities in 2024. This included the *Vlaams-Nederlandse Filosofiedag*, which had not taken place in 2023. Our activity catalogue included a mix of courses, seasonal schools, and conferences. School activities were spread across the academic year and had varying study loads. With programs for research master students and PhD researchers varying per partner, the diversity of our activities intends to cater to different local needs. The school's activities predominantly focus on content-rich courses, but we are launching more activities that center on the professional development of PhD researchers. More on this in Chapter 6.

2.1 Credits obtained by research master students

As mentioned in Chapter 2, the school awarded 409,5 credits to research master students in 2024, 368,5 of which concerned activities in 2024. This is a marked increase when compared to previous years. After investing considerable time and effort to involve partners in organizing ReMa courses and motivating their students to take them, this has finally started to pay off. Important factors that contribute to these positive changes are:

Improved communication. First, the school now proactively reaches out research master coordinators to (a) register new research master students, which increases the number of members likely to actively participate in activities, and to (b) deregister graduated research master students, which decreases the number of inactive members in our administration. Second, the school has undertaken a major effort to renew its website, which had become quite outdated and user-unfriendly by the end of 2023. Third, the OZSW office now regularly reaches out to specific groups of members about specific activities for which they are the primary target audience, rather than sending out a generic newsletter to all members.

Social partner. In 2024, the OZSW engaged a social partner in SWIP-NL (the *Society for Women in Philosophy – Netherlands en Vlaanderen*), in collaboration with whom an autumn school was organized. Research master students were the primary target audience. With 25 participants, of whom 21 obtained the credits associated with the activity, this was a clear success.

~

OZSW x ReMa course modules. In 2024, the OZSW and the six research master programs in philosophy launched a new initiative. Each semester, three existing courses in their curricula are extended with an OZSW module worth 2 additional credits. The module consists in organizing an academic symposium about a theme common to the three courses. Students make a budget, book rooms and catering, invite keynote speakers, write all associated communications, moderate discussions during the symposium, and each present a paper during the day (based on work done in their course). The first iteration drew eleven participants. Note that credits for this activity were not

awarded until 2025, because the concluding symposium following coursework and symposium preparation in the 2024 fall semester took place in March 2025.

2.2 Credits obtained by PhD researchers

As mentioned in Chapter 2, in 2024 the number of credits awarded to PhD researchers fell to 171 from 326.5 in 2023 and 351 in 2022. The cause is that two PhD courses from those years, *Biomedical Ethics* and *Philosophy of Responsible Innovation*, did not continue in 2024. These courses combined used to award roughly 150 credits per year.

This points to a weak point in the organizational structure of Dutch research schools. Since teaching a course for a research school is a voluntary and unpaid activity, our catalogue is vulnerable to courses disappearing from one year to the next.

This phenomenon is probably exacerbated by the fact that many OZSW partners do not offer their staff adequate hourly compensation for teaching an OZSW activity. This problem has persisted for years now, as can be seen in previous annual reports, reports to the DLG, and minutes of OZSW board meeting. We discuss this in Chapter 4.

2.3 Credits obtained versus obtainable credits

This is the first year in which the OZSW actively tracks this metric. In 2024, **63%** of obtainable credits were awarded (i.e. 63% of research master students and PhD researchers participating in an educational activity completed its final assignment and was awarded a course certificate). We do not have detailed information about why some participants follow courses without making the final assignment to get the corresponding credits. This would require a far more detailed information flow from courses to the OZSW office than we can realize (including information about who takes the course just out of interest without needing the credits, about which PhD participants do or do not need to obtain credits in their graduate school, and so on).

Nevertheless, we can tentatively note the following:

1. For a variety of possible reasons, some credits are not actually awarded until the next calendar year. See the table in Section 1.5 for an illustration.
2. Research master students ought to obtain 10 credits through the OZSW, but only in principle. This may increase the likelihood of them participating in activities only out of interest, without intending to make the final assignment and obtain the corresponding credits.
3. PhD researchers are often not required to obtain course credits through the OZSW or otherwise. This, too, increases the likelihood of course participants who do not make the final assignment to thereby obtain the credits.
4. Courses can have PhD researchers as their primary target audience. This might cause research master students to attend without completing the course, simply because the materials covered are somewhat too advanced.

Chapter 3: Quality control

1. Before an activity is greenlighted, its corresponding chamber assesses and helps finetune its content and form.
2. Once an activity is greenlighted by its corresponding chamber, the OZSW office helps finetune its practical aspects (registration, communication, payment of fees, and so on).

3. When registering for an activity, participants are made aware of the OZSW code of conduct, which provides a framework for interactions during activities. [1] The OZSW code of conduct also contains a complaints procedure.
4. After each activity, all participants are sent a survey. Survey results are discussed in chamber meetings. Results of these discussions are input for meetings between chamber chairs, the director and assistant director, the chair of the PhD council, and the chair of the board, which take place at least once per semester.

Between 2017 and 2023, the response rate for our surveys varies from 30% to 50%, and the average course score is an 8.6 in a range of 7.14 – 9.33 awarded to individual courses.

In 2024, the survey response rate was 34%, the average course score was 8.7, and the range of scores for individual courses was 8.00 – 9.46. These numbers exclude one outlier. The survey for *On self-identity in the high modern age* was completed by only one of the nineteen participants, and they gave the course a 5.0.

Chapter 4: Accomplishments and challenges

To prevent needless repetition in this report, the school's accomplishments and challenges are discussed in Chapter 6.

Chapter 5: Finances

The financial results for 2024, the budget for 2025, and the spending plan until 2028 are in the document "*OZSW - Financieel overzicht bij jaarverslag 2024*" that accompanies this report.

Last year was the first OZSW year in Nijmegen. As such, the new OZSW office drafted the budget for 2024 and spending plan until 2027 *during* the process of sorting school archives and becoming familiar with the school's financial situation and spending patterns.

5.1 Budget and results for 2024

In 2024, instead of incurring a planned €21.787 loss to decrease reserves, the OZSW had a positive financial result of €14.078. As can be seen in appendix 3, the major contributing factors are:

1. An unexpected spike in new PhD members, which even drowned out the lower-than-expected miscellaneous earnings from e.g. participation fees from non-members, the overall effect being €6000 more in revenue than budgeted for.
2. Personnel costs were €8000 lower than budgeted for, of which roughly €3000 are invoices from external partners that did not arrive until 2025 and could no longer be booked in 2024.
3. Instead of declaring costs of €5.000 in line with its allotted budget, the annual OZSW conference transferred a €3.187 surplus to the school. This means that total participation fees outweighed total conference costs by the latter amount.
4. The school's new social partner, SWIP-NL, had a €5.000 euro budget to organize an autumn school, of which €2.088 was spent. This was the first iteration of this event, and budgeting will be more accurate in subsequent iterations.
5. The research master winter school had a budget of €5.000 but spent €2.465, and research master students declared less travelling costs than we had expected.

[1] Also found on the OZSW website under the policy statements in the 'About the OZSW' section.

5.2 Projections for 2025-2027

In 2024, the DLG approved a spending plan up to and including 2027 for the OZSW, with a major aim being the decrease of school reserves. Appendix 3 contains an updated version of this spending plan.

As can be seen in the spending plan, the overall strategy remains intact. The OZSW seeks to steadily decrease school reserves by:

(A) Temporary substantial increases in the budgets for chambers and for major events.
(B) One-off large conferences for each of the chambers.
(C) Funding new activities, such as the SWIP-NL partnership in 2024 and the Radboud Reflects science communication course in 2025.

The major lesson learned in 2024 is that the school should also lower participation fees in several cases, which we have already implemented for the 2025 OZSW conference. The conference's organizing team has also given out 23 bursaries to help cover costs for junior academics.

5.3 Insufficient funding for staff

As per DLG policy, OZSW divides its revenues into two categories:

1. Structural funding from financing bodies exists to cover personnel costs.
2. Variable funding (from membership and participation fees, as well as from the performance-based funding for research master students) exists to cover activity costs.

From the **orange** cells in the financial projections, it is clear that the school's structural funding now surpasses its personnel costs. If nothing changes, this will amount to a **funding shortage of €13.000 annually** in 2028.

This also means that if the school succeeds in bringing its reserves to an amount of less than €37.000 by the end of 2027, it will then not be long before the school empties its reserves and operates at a deficit.

5.4 Attuning activity budgets to variable funding

As described in the 2024 spending plan, the OZSW will start varying some of its activity budgets to keep them attuned to the school's variable income (which is meant to cover activity costs). One way to do this is to alter the annual budgets for chambers and major activities in line with variable income.

Two factors complicate such attunement. First, school activities can easily overshoot or 'undershoot' their budgets, for example by drawing more paying participants than initially expected. Second, variable income is capricious. It largely consists of membership and participation fees, both of which are difficult to predict accurately.

Ideally, once school reserves have been reduced to the required amount by the end of 2027, variable spending should no longer exceed variable income. As can be seen in the financial statements, and keeping the caveats just mentioned in mind, activity spending could still exceed its activity budget by some €3000 euros at that point.

Beyond varying budgets for specific activities, the school will therefore explore if there are any relatively expensive activities that ought to be revised or even discontinued.

Chapter 6: Reflections and prospects

6.1 Reflections on last year

With the transfer of the school's office to Radboud University, 2024 was a busy year. The school's financial, administrative, and communicative infrastructures have been successfully aligned with Radboud University's overall systems.

In addition, the OZSW office has initiated a number of improvements to the school. The most notable improvements are listed below.

6.1.1 Communication

1. Thorough renewal of the OZSW website.
2. The generic newsletter has been replaced by targeted outreach to specific groups.
3. More proactive and regular contact with research master coordinators.

6.1.2 Internal organization

1. In consultation with the chambers and PhD council, a document describing mutual responsibilities and expectations in the organization of school activities has been written. This makes it easier to recruit new members and chairs for the chambers and discuss how chambers are doing.
2. The OZSW office has started to create standardized scripts for recurring (annual) activities. These scripts will be tested and finetuned in light of the actual organization of events, so we expect to have a fully functioning set of scripts two years from now.

6.1.3 Activities

1. The school implemented a code of conduct, implemented a complaints procedure, and updated its privacy policy. When registering for events, participants are pointed to these statements.
2. Given its goal to cooperate with relevant social partners, the school has partnered with SWIP-NL to organize an autumn school. This was a success and will be repeated next year.
3. The school has implemented OZSW course modules attached to research master courses at partner institutions. In these modules, students organize (and speak at) an academic symposium that builds on the contents of their courses (as discussed in section 2.1).

6.2 Prospects for the future

Appendix 3 contains a list of activities in 2025

6.2.1 Activities in 2025 and beyond

From 16 activities in 2024, the OZSW grows to organizing 25 activities in 2025. We welcome this growth, but based on the previous year we also note that the OZSW office does not have the operational capacity to grow beyond this number in 2026 and beyond. In addition, further quantitative growth might also cause simultaneous activities to start competing for participants.

6.2.2 Improving the OZSW x ReMa modules

In 2024, the OZSW x ReMa course modules (see section 2.1) proved to be very promising. Nevertheless, the office found that the coordination of these modules takes an inordinate amount of time and effort. This is because students from three courses at three universities must be brought together into one course in which they earn supplemental credits, which takes a lot of administrative smoothing between what amounts to four institutions. In addition, the budget for the activity is now shared across three teachers in three courses. From the academic year 2025-2026 onwards, the

OZSW office intends to reformat this initiative by offering a single course that culminates in an academic symposium. This will be easier to administrate and *also* more accessible to students (because it is less fragmented across curricula and universities). The six research master coordinators will be consulted in this redesign.

6.2.3 Research-oriented activities

In 2024, the OZSW chambers committed to organizing more events specifically aimed at (senior) researchers. This commitment can help offset the tendency to exclusively focus on educational events for research master students and PhD researchers. Since school activities are planned well in advance, the results of this commitment are expected to start showing in 2026 and beyond.

In 2024, the OZSW chambers were each given a one-time budget to organize a one-off conference in their respective domain. These three conferences will take place in 2025, 2026, and 2027.

6.2.4 Skill-oriented activities and professional development

Almost all OZSW activities are content-driven. In 2024, the school has started paying more attention to activities aimed at skill acquisition and professional development.

First, the PhD Council's budget and mandate was extended. Starting in 2025, the council will organize an annual PhD day around a theme relevant to the professional development of PhD researchers in philosophy in Dutch academia, regardless of the specific topic of their research.

Second and also starting in 2025, a science communication course for PhD researchers will be offered in collaboration with Radboud Reflects. Where our existing partnership with *Bij Nader Inzien* and Brainwash is aimed at bringing PhD researchers to a stage where they present their work to the general public, this new course also trains PhD researchers to communicate their research to *specific professional groups*.

6.2.5 Academic philosophy and high school philosophy

The Dutch high school teachers in philosophy are united in the VFVO (*Vereniging Filosofiedocenten in het Voortgezet Onderwijs*). There exists no structural contact or collaboration between our respective professional groups, despite many common points of interest between academic and high school philosophers.

These include but are not limited to (a) the attunement of the last year of high school philosophy teaching to the first year of university philosophy teaching, (b) the exchange of best practices and insights regarding didactics and developments in f.i. LLM use and overall reading proficiency, (c) '*bijscholing*' of teachers, (d) activities around the school exam theme, and (e) possible collaborations around '*docentpromovendi*'.

In 2025, the OZSW and VFVO will start exploring how and in what form our respective organizations and members might fruitfully collaborate on these themes.

6.2.6 Challenge: compensation for teachers

In 2024, the OZSW office asked chamber members as well as graduate school coordinators (or their local equivalents) whether there was a local procedure for OZSW activity organizers to get (hourly) compensation for their work, as DLG policy prescribes (i.e. to get time spent for the OZSW recognized in their local task allocation).[2] The resulting answers are not optimal:

[2] Notitie DLG "Onderzoeksscholen en graduate schools" d.d. 28-07-11

- 3 partners have a functional compensation procedure (Eindhoven, Delft, and Utrecht) for OZSW activities.
- 2 partners have a compensation procedure in which OZSW course organization competes with other research schools (UvA) or miscellaneous managerial tasks (Rotterdam) to claim a set amount of available hours.
- 7 partners either have no compensation procedure at all *or* a compensation procedure that members report to be an ineffective 'paper tiger'. Some partners reported that there are 'informal ways' to get compensation, which is of course frustratingly vague for the OZSW to have to communicate to aspiring organizers.

This is a serious point of improvement that was already raised in past reports and internal documents. Following DLG policy, each partner should have an explicit and effective procedure via which OZSW activity organizers are compensated for their efforts. This matter will have priority in OZSW board meetings in 2025. Given the structural workload-related issues that many humanities / philosophy departments struggle with, this promises to be a complex discussion.

6.2.7 Challenge: school finances

As described in chapter 5, the OZSW has a spending plan in place to reduce its reserves to the required level by the end of 2027. Given the unpredictable nature of especially the school's variable income (membership and participation fees) and spending (organizers overshooting and 'undershooting' budgets), this plan will be updated annually.

One major challenge is that, as stated in chapter 5, the school's structural funding now no longer covers its personnel costs. This, too, will be a matter of attention for the board in 2025 and beyond, but can likely only be resolved at the DLG level, given that much hinges on whether or not the school's structural funding will be indexed to match annually increasing salary costs.

6.2.8 Concluding remarks

Looking at article 3 of the *Gemeenschappelijke Regeling*, the school is highly active with regards to the education of research master students and PhD researchers (via our activity catalogue), the attunement of school activities to local teaching and research (via our chamber members), communication about school activities (via our new website and targeted communications), and facilitating and promoting the mobility of research master students and PhD researchers (by organizing events at different universities and by offering to reimburse travel costs for research master students).

The school's annual activities (such as the OZSW conference, the research master winter school, the PhD writing retreat, the *Vlaams-Nederlandse filosofiedag*, and from 2025 onward also the PhD day) offer platforms where (aspiring) researchers meet and where collaborations can take root. With the chambers starting to organize more research-oriented events from 2026 onwards, more such opportunities will be created (and also tied to specific *contents*, since these events will be thematic).

With 850 members, the OZSW clearly has a representative function as a point of contact within the discipline. Increasing our collaboration with organizations such as the VFVO will also increase the school's visibility to relevant professional groups outside academia. The school's partnerships with Bij Nader Inzien and Brainwash remain its current outreach platforms to the more general public.

Appendix 1: Members

Members per category

	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	**2024**

Data Driven History of Ideas*	OZSW x ReMa*	6 (+2=8)	6	-	1	*0*	*1*	UvA
Topics in Hellenistic Philosophy*	OZSW x ReMa*	5 (+2=7)	5	-	5	*0*	*5*	UU
Epistemology and Cognitive Science*	OZSW x ReMa*	6 (+2=8)	6	-	5	*0*	*5*	VU

The courses *Data Driven History of Ideas*, *Topics in Hellenistic Philosophy*, and *Epistemology and Cognitive Science* are part of an initiative organized by the OZSW and the six research master programs in the Netherlands. Each academic year, one course from each program (so six in total and three per semester) serves as a foundation onto which an OZSW module is added. This consists in students from the three courses working together to organize an academic symposium on a theme that the courses have in common. The OZSW office supervises this group. Students organize their own academic symposium, during which they also present conference papers. They receive an additional 2 ECTS for this (hence: for a course of 6 ECTS, the student receives 8 ECTS in total). The first three courses took place in semester 2 of 2024 and the corresponding symposium was held in 2025, hence no OZSW credits were awarded in 2024 yet.

Appendix 3: Activities in 2025

Title	Period	Type	EC	Organizer
The Agent in Logic	Jan	Winter school	2,5	LU +UU
Creativity & Generative AI	Jan	Course	5	TU/e
Mind & Culture	Jan-Apr	Course	5	UU + RU
