Chapter 1: Information about the research school

1.1 Partners

The Dutch Research School of Philosophy (Nederlandse Onderzoeksschool Wijsbegeerte – OZSW) is a collaboration between twelve Dutch institutes for academic philosophy. These are:

TU Delft, Ethics and Philosophy of Technology Section; **TU Eindhoven**, Philosophy and Ethics Group; **Erasmus University Rotterdam**, Erasmus School of Philosophy; **Leiden University**, Institute for Philosophy; **Maastricht University**, Department of Philosophy; **Radboud University**, Faculty of Philosophy, Theology, and Religious Studies; **Tilburg University**, Department of Philosophy; **University of Amsterdam**, Department of Philosophy; **University of Groningen**, Faculty of Philosophy; **University of Twente**, Department of Philosophy; **Utrecht University**, Department of Philosophy and Religious Studies; **VU Amsterdam**, Department of Philosophy.

1.2 Mission

We strengthen academic philosophy in the Netherlands with respect to the following goals:

1. Education. We organize educational activities that give research master students and PhD researchers access to the expertise of academic philosophers across the Netherlands.
2. Research. We organize research activities that give academic philosophers a platform to present their work to their colleagues at Dutch universities.
3. Community. We organize activities that strengthen the social bonds and encourage professional collaborations between academic philosophers in the Netherlands.
4. Outreach. We collaborate with social partners for the dissemination of philosophical research to professional groups inside and outside Dutch universities, as well as to the Dutch public.

1.3 Organization

The OZSW consists of a board, an office, three chambers, and a PhD council.

The board consists of twelve deans and department heads (one from each partner). It sets out school policy and oversees school operations. The chair is prof. dr. Maureen Sie (Tilburg University).

The office handles daily operations. It rotates to a different partner every five years, with Radboud University hosting the school in 2024-2028. The office consisted of dr. Arjen Kleinherenbrink (director, 0.3 FTE), Eva Hendriks (secretary, 0.3 FTE), and, until October, Janneke Toonders (assistant director, 0.5 FTE). Starting in October 2025, Esmée van den Wildenberg replaced Janneke Toonders.

The three chambers are responsible for the school's activities in specific areas of philosophy: *Theoretical Philosophy*, *History of Philosophy*, and *Ethics and Practical Philosophy*. Each chamber has one member at each partner university. Chamber members keep in touch with research and education in their institute, encourage colleagues to organize activities for the school, help finetune the design of activities, and evaluate surveys from activities.

The PhD council has seats for one PhD researcher from each partner. The council has delegates in each chamber to represent the interests of PhD researchers, and it organizes community-building events for PhD researchers.

Lists with our current members of the board, chambers, and council can be found in the ‘About the OZSW’ section of OZSW.nl.

1.4 Members

Appendix 1 contains a table with the number of members per category, as well as lists of PhD researchers and research master students.

By the end of 2025, the school had **806 members**: 218 research master students (68 new), 202 PhD researchers (39 new), and 386 senior researchers (24 new).

The school has five membership types. PhD researchers for whom a partner pays the membership fee (usually these are researchers working for that institute) are Regular PhD members. PhD researchers who are not sponsored by a partner institute are Associate PhD members who either pay their own fee or are sponsored by another institute. Research Master students do not pay a fee and are enrolled by their institute. Senior Members are department members from our partner institutes with (at least) a doctoral degree and do not pay a fee. Associate Senior Members are researchers with (at least) a doctoral degree from other institutes and pay their own fee. Further details about memberships are found under 'Become a member' at OZSW.nl.

1.5 Credits

	Concerning 2025
ReMa	**619.5**
PhD	**412**
Other	30
Total	1061.5

Credits awarded to research master students

619.5 credits were awarded to research master students for activities in 2025, which is an increase of 251 credits compared to 2024. The number of credits awarded per student is now **4.44 times higher** than in the pre-pandemic year of 2019. We reflect on this increase in Chapter 2.

	# ReMa members	# ReMa credits obtained	Ratio credits/student
2019	225	144	0.64
2020	318	95	0.29
2021	302	106.5	0.35
2022	269	231	0.86
2023	256	285	1.11
2024	237	409.5	1.73
2025	218	619.5	2.84

Credits awarded to PhD researchers

The OZSW awarded **412** credits to PhD researchers, which is a major increase from 171 credits in 2024 and improves upon the results of 2023 (351 credits) and 2022 (326.5 credits).

Chapter 2: Overview of education and credits attained

Appendix 2 contains a table with activities organized in 2025.

OZSW educational activities (activities for which credits can be attained) are initiated by the three chambers. After a chamber has greenlighted a proposal, the OZSW office takes over to assist organizers with practical matters such as communication, registration, and payments.

For recurring activities such as the annual OZSW conference, the OZSW office also assists local organizers. Recurring activities rotate to partners according to a schedule made years in advance.

The OZSW organized **29** activities in 2025. They were a mix of courses, seasonal schools, annual activities, and conferences. School activities were spread across the academic year and had varying study loads. With programs for research master students and PhD researchers varying per partner, the diversity of our activities intends to cater to different local needs.

2.1 Credits obtained by research master students

The school awarded **619,5** credits to research master students for activities in 2025. This is a marked increase compared to previous years.

The OZSW sees four reasons for this increase. First, the number of educational activities has increased. Second, in collaboration with the chambers, we have increased the number of educational activities for which research master students are the specific target audience. Third, we are moving away from 1-2 EC courses in favor of courses worth 3-6 EC. Fourth, we have started to refine the internal procedures between the Office and the Chambers in early 2025 (in terms of mutual expectations as to number of courses per year, credits course, budgeting per course, and so on), and this has paid off.

The move to 3-6 EC courses reflects a DLG preference that also makes sense for the OZSW. Research master students must obtain 10 EC through a research school, which becomes unwieldy if most activities only offer 1 or 2 credits. We prefer a model in which a research master student selects 2 or 3 activities from our catalogue during their 2 years of study.

2.2 Credits obtained by PhD researchers

The school awarded **412** credits to PhD researchers for activities in 2025. This is a tremendous increase when compared to the 171 credits in 2024 and surpasses the 326.5 credits from 2023 and 351 credits from 2022.

The reasons for this increase are those named in 2.1: more activities organized, more credits on average per activity, and better attunement between the Office and the Chambers.

2.3 Credits obtained versus obtainable credits

This is the second year in which we track this metric. In 2024, **63%** of obtainable credits were awarded. This means: 63% of the research master students and PhD researchers enrolled in an educational activity completed its final assignment and thereby obtained course credits. In 2025, **59%** of obtainable credits were awarded.

We do not have detailed information about why some participants follow courses without making the final assignment to get the corresponding credits. This would require a far more detailed

information flow from courses to the OZSW office than we can realize (including information about who takes the course just out of interest without needing the credits, about which PhD participants do or do not need to obtain credits in their graduate school, and so on).

Nevertheless, we tentatively note the following:

1. Research master students ought to obtain 10 credits through the OZSW, but only in principle. Not all programs enforce this principle. This increases the likelihood of them participating in activities only out of interest, without intending to make the final assignment and obtain the corresponding credits.
2. PhD researchers are sometimes not required to obtain course credits through the OZSW or otherwise. This, too, increases the likelihood of course participants who do not make the final assignment to obtain the credits.

Chapter 3: Quality control

1. Before an activity is greenlighted, its corresponding chamber assesses and helps finetune its content and form.
2. Once an activity is greenlighted by its corresponding chamber, the OZSW office helps finetune its practical aspects (registration, communication, payment of fees, and so on).
3. When registering for an activity, participants are pointed to the OZSW code of conduct, which provides a framework for interactions during activities.
4. After each activity, participants are sent a survey. Survey results are sent to course organizers and discussed in chamber meetings. The results of these discussions are input for meetings between chamber chairs, the director and assistant director, the chair of the PhD council, and the chair of the board, which take place at least once per semester.

Between 2017 and 2024, the response rate for our surveys varies from 30% to 50%, and the average course score was 8.6. In 2025, the survey response rate was 26,1% and the average course score was 8,65.

Chapter 4: Accomplishments and challenges

To prevent needless repetition, accomplishments and challenges are discussed in Chapter 6.

Chapter 5: Finances

The financial results for 2025, the budget for 2026, and the spending plan until 2028 are in the document "*OZSW - Financieel overzicht bij jaarverslag 2025*" that accompanies this report.

5.1 Personnel costs

As per DLG policy, OZSW divides its revenues into two categories:

1. Structural funding from financing bodies to cover personnel costs.
2. Variable funding (membership and participation fees, plus performance-based funding for research master students) to cover material costs. Material costs mostly consist of activity and partnership costs.

Last year, we reported that funding for personnel costs threatened to become insufficient, because the DLG never indexes FOPOG funding to annual increases in salary costs. Since last year, however,

the DLG has asked us to include our webmaster and the partnership with *Bij Nader Inzien* under material costs in subsequent reports. Because of this, funding for personnel costs suffices for the time being. Do note that this is only because the OZSW has a very modest staff for an organization of its size.

5.2 Budget and results for 2025

In 2025, the OZSW had a negative result of €22,696. This is in line with the DLG obligation to decrease school reserves to €37,000 by the end of 2027. It is, however, roughly €20,000 less than the negative result we planned for. This is mostly because:

1. **Row 10.** The increase in credits obtained by research master students since 2024 outperforms expectations, resulting in almost €10,000 more 'rugzakgelden' than we budgeted for.
2. **Rows 33-37.** The Chambers and PhD Council underspent by €7,200.
3. **Row 39.** The annual conference only spent about €1,000 on its €10,000 budget, mostly because of unforeseen revenues from participant fees.
4. **Row 44.** The budgeted PhD course in public speaking and science communication was cancelled due to a lack of interest.
5. **Rows 47-48.** Research master students declared fewer travelling costs than expected, and the Research Master sympodium only spent about €4,000 on a €6,000 budget.

5.3 Further notable fluctuations in 2025

1. **Rows 8 and 9**. In 2025, we started to update our member database. One consequence is that several Associate PhD and Associate senior members have cancelled their membership, either because the membership type no longer applied or because they had lost interest.
2. **Row 11**. When taking over in 2024, we inherited a format that budgeted for activity revenues. We have now discontinued that quirk, because activities must be budgeted to break even. Otherwise, participants do not pay for what they attend, but for activities that they do *not* attend. Unexpected 'profits' from activities will instead factor into the annual financial realization.
3. **Row 20**. Salary costs for the assistant director were higher than expected because of the overlap needed to transfer tasks to the new assistant director.
4. **Row 27**. Because of a delay, Q4 from 2024 of the BNI partnership was to be paid in 2025. However, in 2025 Radboud University used an external broker to handle external contracts, and the €1,598 overshoot seems to be due to miscommunication about a wrongly submitted invoice *crossing* with its proper version between BNI, the OZSW office, this broker, and Radboud University's financial department. This will be sorted out in 2026, and resulting corrections will be made visible in the 2026 financial realization.

5.4 Notable budgeting decisions for 2026

1. The financial support for **BNI** has been changed from a 'ZZP' contract to an annual lump sum subsidy. Both parties deem this more appropriate for the nature of the partnership, and it helps prevent mistakes concerning crossing invoices similar to point 4 in 5.3 above.
2. The budgets for **Chambers** have been made equal. This gives *Theoretical Philosophy* and *History of Philosophy,* who were historically given a (far) smaller budget than *Ethics and Practical Philosophy,* the means to organize a healthy number of activities, as discussed in chapter 6 and as shown in appendix 2 and 3. This makes for a more balanced activity catalogue for the school.
3. The **annual conference** has been given an €8,000 budget increase to compensate for this event's high revenues in the last two years. The budget is used to minimize participation fees,

which in turn minimizes the chances of participant fees again making the event break (almost) even or turning a profit.

4. A separate budget post has been created for courses organized by members at the **Technical Universities**. Every year, the 4TU.Ethics graduate school offers a number of courses through the OZSW. This structural collaboration used to be financed through the *Ethics and Practical Philosophy* chamber budget. Separating the two gives the chamber full control of its budget. Under the now dedicated budget, OZSW and 4TU.Ethics are also formalizing this longstanding collaboration in an agreement that spells out the annual workflow and mutual expectations.
5. Every year, the OZSW and BNI collaborate to put six young researchers on the 'talent stage' of **Brainwash**, the country's largest philosophy event. Formerly, this was outsourced fully to BNI for €5,500, with them hiring a third party to provide public speaking training to the candidates. Starting in 2026, BNI instead receives 1,000 euros to organize the activity, and OZSW collaborates with Radboud Reflects to give candidates public speaking and science communication workshops leading up to the event, at a cost of about €3,000.
6. In 2025, the OZSW experimented with 2EC **Research Master 'modules'** added onto existing master level courses at school partners, followed by a student-organized symposium after each semester's modules. The content of this initiative was promising and well-received by participating students. However, the amount of time it took the OZSW office to coordinate this, plus the many administrative difficulties between the OZSW and local programs that these hybrid courses created, led us to discontinue the initiative.

5.5 Projections for 2026-2028

Since 2024 the OZSW has done the following to decrease reserves to €37,000 by the end of 2027:

(A) Temporary substantial increases in the budgets for chambers and for major events.
(B) One-off large conferences for each of the chambers.
(C) Funding new activities, such as the SWIP-NL partnership that started in 2024.

With our current spending pattern, we estimate to land at a reserve of about €33,000 at the end of 2027. At that point, the school must have a strategy in place to cut annual spending on material costs by an estimated €40.000 to break even in 2028 and beyond.

This is a challenge, because at that point it means decreasing activity and partnership expenses from roughly €100,000 annually to about €60,000 annually. At the same time, it is a challenge for which we are somewhat prepared, as much can be done by reversing the temporarily increased spending just mentioned. The OZSW board will make the necessary strategic decisions in 2026.

Chapter 6: Reflections and prospects

Appendices 2 and 3 respectively contain lists of activities in 2025 and 2026

6.1 Reflections on last year

6.1.1 Courses and credits

With 29 activities that on average scored an 8,66 in surveys, the OZSW looks back on a year full of interesting and highly valued events. The school is very happy that the number of credits awarded to PhD researchers increased from 171 in 2024 to **412** in 2025, and that the number of credits awarded to Research Master students rose from 285 in 2023 to 409,5 in 2024 and now **619.5** in 2025.

Nevertheless, this marked increase only brings the ratio of credits per Research Master student per year to **2.84** whereas it should be **3.75** (10EC per 2 years makes for 5EC per year of which 75% needs to be attained for the full 'rugzakgelden' funding to be awarded). In 2025, the school received €25,856 which could have been €37,410 had the ratio been right. This would have increased the school budget for material costs (activities and partnerships) by almost 20%.

6.1.2 Internal organization

[1] The OZSW office has been streamlining the procedural workings of the three Chambers and the PhD Council. In collaboration with the respective chairs, we created internal agreements about – among other things – the minimum and maximum number of activities to organize, the amount of focus to put on each membership type when designing activities, standard budgets per educational activity, and annual deadlines for proposals to be handed in. The increasing numbers of activities and obtained credits demonstrate that such increased procedural clarity pays off.

[2] Our budgeting was streamlined as described in 5.4. The school is content with the results.

[3] Last year's annual report announced the intent to form a partnership with the VFVO, the Dutch society for high school teachers in philosophy. Despite many potential benefits for both organizations, this initiative was cancelled due to a lack of available time and resources.

6.1.3 Adequate compensation for activity organizers and teachers

As per DLG policy, organizing or teaching a research school activity should be offset against one's task allocation for that year, for example by including the activity in one's teaching hours for that year.

At most OZSW partners, however, this is not structurally the case. Either such compensation is not awarded, or it must be negotiated on a case-by-case basis. This shortcoming has been noted many times in the past in our own board meetings and annual reports, as well as by external research assessments.

The OZSW board reviewed and discussed this matter in 2025. Given various local circumstances at school partners, the board unfortunately does not see ways to operate in accordance with DLG policy on this point.

6.1.4 Research assessment

The 2025 research assessment finds that the OZSW is "highly effective in fostering a nationwide philosophical community, promoting learning and collaboration among PhD researchers, ReMA students, and faculty across Dutch universities." The committee's overall impression is that of "a well-functioning research school, that delivers high-quality output in spite of minimal staffing."

The assessment report makes a series of recommendations, listed here with our brief response to each point.

1. **To develop a clear vision for balancing *broad* and *specialized* courses to ensure strategic coherence and efficient use of resources**. The school will keep this recommendation in mind when reconsidering its activity catalogue with drastically reduced spending from 2028 onward, as discussed in 6.2.
2. **To further clarify expectations and monitor participation of PhD researchers in courses to improve planning and engagement**. Improving information flows to and from activity

participants is a continuous concern for the school. One practical limit is that the OZSW does not have any control over what local contracts and agreements (which can vary per institute and even per person) expect from PhD researchers in terms of education.

3. **To ensure balanced course offerings across the three chambers and geographic distribution of partner universities**. This is part of why Chamber budgets were equalized: see 5.4 above.
4. **To update the OZSW website to improve accessibility and relevance**. In 2024 and 2025, major revisions were made to the OZSW website.
5. **To establish consistent and transparent compensation policies for faculty in teaching OZSW activities, distributing the teaching load more fairly among partner institutions**. The OZSW board has decided against this: see 6.1.3 above.
6. **To expand strategic collaborations with partner institutions and other research schools**. The school is enthusiastic about such collaborations, but as the VFVO example in 6.1.2 demonstrates, our current resources do not allow for such further expansion.
7. **To further strengthen organizational structures and address ongoing staffing and logistical challenges**. The school continuously works to improve its organizational structure but does not currently have the means to address its staffing challenges. If the DLG does not increase FOPOG funding to reflect how salary costs have increased over the years, staffing must remain minimal.

6.2 Prospects for the future

Our **number of activities** will grow to about 35 in 2026 (after growing from 16 in 2024 to 29 in 2025). This is partially due to improvements in budgeting, communication, procedural efficiency, and organizational efficacy. Another important part of the reason is the school's heightened spending pattern to decrease its reserves. This number of activities puts high strain on the OZSW Office, which can realistically handle no more than 30 events with its current capacity.

At the same time, **the ratio of credits** per Research Master student per year must still be increased from 2,84 to 3,75. This cannot be achieved by organizing *more* activities. First, we do not have the capacity for it. Second, this would make activities compete for students and thus be unproductive.

Instead, it should come from better application of a rule that is already in place. As per DLG policy, research master students **must attain 10 EC** through research schools. Six school partners have a research master program, and not all of them actively enforce this rule. This must change if the ratio is to improve.

These points factor into the biggest challenge that the school will face in the upcoming years. The school plans to decrease its reserves to a maximum of €37,000 by the end of 2027. **Starting in 2028, annual spending on material costs then needs to drop by about €40,000 to break even**. This is a significant decrease from the roughly €100,000 that the school is currently spending on activities and partnerships each year to decrease its reserves.

School activities are planned well in advance. Between September 2026 and March 2027, the OZSW Office and Chambers will design the activity catalogue for 2028. Q4 of 2026 is exploratory (gauging interest for courses) and Q1 of 2027 is preparatory (designing the actual catalogue).

This means that before December 2026, the OZSW board will set a new strategy for its activities and partnerships from 2028 onwards.

6.3 Conclusion

Looking at article 3 of the *Gemeenschappelijke Regeling*, the school is highly active with regards to the education of research master students and PhD researchers (via our activity catalogue), the attunement of school activities to local teaching and research (via our chamber members), communication about school activities (via our renewed website and targeted communications to specific groups of school members), and facilitating and promoting the mobility of research master students and PhD researchers (by organizing events at different universities and by offering to reimburse travel costs for research master students).

The school's annual activities (such as the OZSW conference, the research master winter school, the PhD writing retreat, the *Vlaams-Nederlandse filosofiedag*, and since 2025 also an annual PhD day) offer platforms where (aspiring) researchers meet and where collaborations can take root. With many hundreds of members and over two dozen events, the OZSW clearly has a representative function as a point of contact within the discipline.

Appendix 1: Members

Members per category

	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	**2025**

Postdoc	-	-	-	-	-	-	-	-	-	-	3	3

Some fields are empty because (a) the OZSW did not distinguish between different types of members in the same category before 2021, and (b) the OZSW has only just started to distinguish 'postdoctoral researchers' as a separate type (these were included under 'regular senior members' thus far), with only 3 postdoctoral researchers having identified themselves as such at the time of writing this report.

Names of PhD researcher members

Boncheva	Gergana	Regular PhD member	Erasmus University Rotterdam	29-9-2021
Asad	Adam	Regular PhD member	Radboud University Nijmegen	1-4-2025
